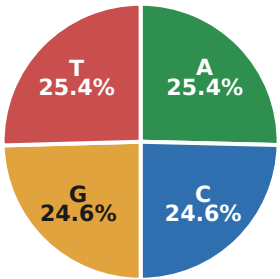
Nucleotide composition of non-coding training sequence

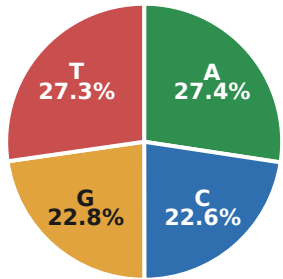
A Evo 1



OpenGenome

30.8 million non-coding bases

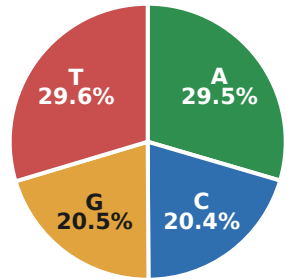
B Evo 2



OpenGenome2

18.7 million non-coding bases

C HyenaDNA



hg38

2.90 billion non-coding bases

Non-coding = bases outside CDS, not necessarily regulatory. Microbial CDS: Pyrodigal; hg38 CDS: GENCODE v49.
Evo 2 covers 47.3% of the phase-one mixture with separable CDS labels; unannotated eukaryotic genic/mRNA sources are excluded.
